PRICE 35 Euro

ILLUSTRATIONS Color

PAGES 288

COVER Hard

SIZE 16,5 x 24 cm

PUBLICATION DATE October 2008

PUBLISHED BY ACTAR

The first monograph on the innovative engineering firm, proposing new connections between radical engineering and design.

Collaborating with leading architects like Zaha Hadid, Foreign Office Architects, Norman Foster, and Will Alsop, Adams Kara Taylor have become the engineers of choice for projects that redefine the conventional boundaries between structural engineering and architecture. Their holistic approach expands structural thinking to include technical solutions, aesthetics, and advanced research to adapt both diverse architectures and design methodologies.

Organized into a series of synthetic themes - complexity, trans-scalarity, modelling, process - this book presents a cross-section of diverse projects and methods as a manual for new relations between radical engineering and design. Contributors include Alejandro Zaera-Polo, Simon Allford, Patrik Schumacher, Tim Anstey, Mohsen Mostafavi, and Michael Speaks.

Adams Kara Taylor is a design led structural and civil engineering consultancy based in London.

* The first monograph on one of the most innovative engineering firms in the world today.

* Features detailed explanations of iconic projects with leading architects including Zaha Hadid (Wolfsburg Science Centre), Foreign Office Architects, Will Alsop, and Norman Foster.

* A guide to new relationships between engineering and architecture, in an era when digital technologies have radically reshaped traditional boundaries.

* For both engineers and architects.
